6 **FINISAR'S OPTOELECTRONIC TRANSCEIVER TECHNOLOGY**

7 23. Optoelectronic transceivers are used to provide the electrical-to-optical and
8 optical-to-electrical conversion required for modern communication over fiber optic cables.
9 Optoelectronic transceivers are a vital component of the high-speed broadband revolution that has
10 transformed the way consumers all over the world watch television, surf the internet, and
11 communicate.

12 24. Finisar is a leading supplier of optoelectronic transceivers and invests substantially
13 in research and development of new and innovative technologies and products. Finisar has been a
14 pioneer in the optoelectronics industry, developing, for example, automated transceiver
15 calibration methods and adding diagnostic intelligence to its transceivers.

16 25. Finisar developed the digital processor controlled laser diode calibration
17 technology claimed in the '769 patent directed to automation of the process of selecting the drive
18 current level of the laser diode.

19 26. Finisar engineers later developed an improved digital diagnostics technology
20 claimed in the other Digital Diagnostics Patents directed to real-time monitoring of transceiver
21 operating parameters with dramatically improved diagnostic data storage and host access
22 capabilities, helping to identify abnormal and potentially unsafe operating conditions, simplifying
23 maintenance, and enhancing reliability.

24 27. Optoelectronic high-speed networks using optoelectronic transceivers with digital
25 diagnostic monitoring features are now in widespread use, in no small part because of the efforts
26 of Finisar. Finisar has worked to bring its advanced technology to the entire industry not only by
27 designing new products, but also by its participation in and commitment to working with industry
28 committees to create standards and common specifications for transceiver digital diagnostics.

1 28. One such specification is the SFF-8472 specification, titled "Digital Diagnostic
2 Monitoring Interface for Optical Transceivers," which was published by the Small Form Factor
3 Committee. This document specifies a digital diagnostic feature set for Small Form Factor
4 Pluggable ("SFP") transceivers. It defines an enhanced digital diagnostics monitoring interface
5 for optical transceivers which allows real-time access to device operating parameters.

6 29. The SFF-8472 specification was developed at least in part by Finisar employees
7 and relies upon Finisar's inventions.

8 30. Industry adoption of the SFF-8472 specification was swift. SFF-8472-compliant
9 transceivers are now widely available.

10 31. Similar digital diagnostic capabilities have been incorporated into other widely
11 used industry multi-source agreement specifications and/or products, including but not limited to
12 the Enhanced Small Form Factor Pluggable ("SFP+"), 10 Gigabit Small Form Factor Pluggable
13 ("XFP"), DWDM Pluggable Transceiver ("DWDM"), XENPAK, Broadband Passive Optical
14 Network ("BPON"), Gigabit Passive Optical Network ("GPON"), and Gigabit Ethernet Passive
15 Optical Network ("GEPON") specifications and/or products. For example, the XFP specification
16 states that the mandatory XFP 2-wire serial interface is "modeled largely after the digital
17 diagnostics monitoring interface proposed for the SFP and GBIC optical transceivers and defined
18 in SFF draft document SFF-8472 Rev 9.3"

19 32. All of the major transceiver manufacturers, including the Defendants, make
20 transceivers that include digital diagnostics. The widespread acceptance and use of Finisar's
21 digital diagnostics technology by numerous standards bodies and competitors demonstrates the
22 industry's recognition of the value and importance of Finisar's innovation.

23 33. Finisar has licensed its Digital Diagnostics Patents to other manufacturers in the
24 industry.

25 34. Finisar has also provided notice of its Digital Diagnostics Patents portfolio, and
26 offered licenses to this portfolio, to others in the industry, including each of the Defendants.
27 MRV and Source Photonics' predecessor, Luminent, Inc., first received notice of one or more of
28 the Digital Diagnostics Patents before March 28, 2003. NeoPhotonics first received notice of one

1 or more of the Digital Diagnostics Patents on or before September 26, 2006. Oplink first received
2 notice of one or more of the Digital Diagnostics Patents on or before December 13, 2005. Each
3 of the Defendants has refused to license Finisar's Digital Diagnostics Patents.

4 35. Finisar also recognizes the technical contributions of other companies as
5 demonstrated by its purchase of the Optoelectronic Module Patents from Matsushita Electric
6 Industrial Co., Ltd.

7 **THE ACCUSED PRODUCTS**

8 36. The Accused Products include, but are not limited to, Defendants' optoelectronic
9 transceivers that (i) are calibrated under processor control pursuant to the claims of the '769
10 patent, including for example and without limitation, NeoPhotonics' SFF, SFP, 1x9 SC, 2x9 SC,

23 **FIRST CLAIM FOR RELIEF**

24 (Infringement of U.S. Patent No. 5,019,769)

25 37. Finisar realleges and incorporates by reference the allegations stated in paragraphs
26 1 through 36 of this Complaint.

27 38. Defendants, by engaging in the unauthorized manufacture (or causing to be
28 manufactured), importation, use, sale and/or offer for sale of Accused Products that are covered

COMPLAINT FOR DAMAGES
AND INJUNCTIVE RELIEF

1 by one or more of the claims of the '769 patent and/or that are made overseas by processes that
2 are covered by one or more of the claims of the '769 patent, have committed acts of direct
3 infringement of one or more claims of the '769 patent. These acts constitute violations of 35
4 U.S.C. § 271.

5 39. Defendants have committed acts of contributory and/or inducement of
6 infringement of one or more claims of the '769 patent by selling, supporting, and/or encouraging
7 infringing methods of use of the Accused Products to third parties, including but not limited to
8 customers and end-users. Such optoelectronic transceivers are not staple articles or commodities
9 suitable for non-infringing uses. On information and belief, Defendants knew or should have
10 known of the '769 patent, at least because Finisar provided notice of the '769 patent to the
11 Defendants prior to some or all of the sales to third parties of optoelectronic transceivers covered
12 by one or more of the claims of the '769 patent. These acts constitute violations of 35 U.S.C. §
13 271.

14 40. On information and belief, Defendants' infringement of the '769 patent is, has
15 been, and continues to be willful and deliberate. Despite knowing of the '769 patent, the
16 Defendants have continued to directly and indirectly infringe one or more claims of the '769
17 patent, entitling Finisar to increased damages under 35 U.S.C. § 284 and to attorneys' fees and
18 expenses incurred in prosecuting this action under 35 U.S.C. § 285.

19 41. Such infringement has injured and damaged Finisar. Unless enjoined by this
20 Court, Defendants will continue their infringement, irreparably injuring Finisar.

21 42. As a direct and proximate result of Defendants' infringement of the '769 patent,
22 Finisar has been and continues to be damaged in an amount yet to be determined.

SECOND CLAIM FOR RELIEF
